RESEARCH INTERESTS

Currently, my research is focused on the design, and synthesis of novel heme oxygenase 1 (HO-1) inhibitors with peculiar anticancer activity, as well as the development of hybrid compounds obtained by combining the structure of imidazole-based HO-1 inhibitors with sigma receptor ligands and/or anticancer drugs, as an innovative approach to overcome drug resistance as well as to improve cancer chemotherapy. My research interests include drug discovery, structure-based drug design, hit to lead optimization, organic synthesis.
